MOBILE CONTROLLER

WI-FI CONTROL FOR SPLIT, MULTI & SKYAIR SYSTEMS

Mobile Controller puts your air conditioner's frequently used functions at your fingertips with an easy to use app.

In conjunction with Daikin's BRP072C42(-1) wireless LAN adaptor[1], the easy to use Mobile Controller app lets you use your smartphone or tablet to operate your Daikin air conditioning unit via Wi-Fi or the internet.

Up to 10 systems[2] can be conveniently monitored and controlled on the app anywhere, anytime.

THREE WAYS TO CONNECT

1. DIRECT CONNECTION

For locations without a Wi-Fi network, the app can wirelessly connect directly to the a wireless LAN adaptor equipped air conditioner, when in range.

2. WI-FI CONNECTION

A LAN equipped air conditioner can easily be joined to a local Wi-Fi network. Once connected, the system can be controlled from any networked Android or iOS device.

3. INTERNET CONNECTION

Monitor and control your system from virtually anywhere, adjusting temperature and setting for a comfortable environment ready for when you arrive home. With no subscription costs from Daikin, all you need is a permanent internet connection for your Wi-Fi network, and an internet connection for your phone or tablet.

1 BRP072C42(-1) includes Modbus protocol
2 Each system requires an adaptor and must be connected on the same Wi-Fi network
